Time and Attendance – with integrated Access Control and Data Capture facilities ONE SYSTEM ONE SOLUTION

LOGGING ON TO A JOB

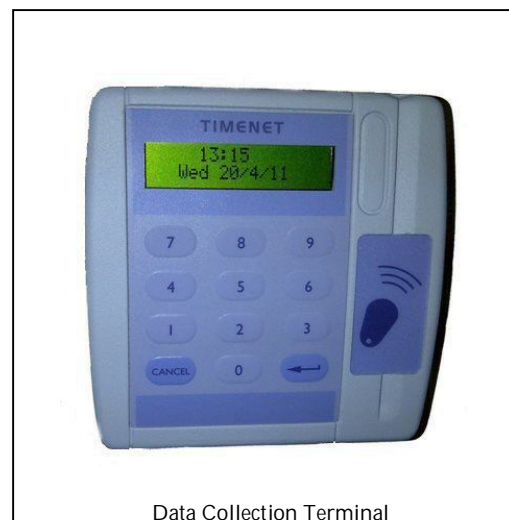

Jobs are setup using TimeNet software with prompts/information added, this data is assigned a job badge, employees select which job they are about to action by flashing the Job badge in front of the reader and the terminal will prompt the employee to clock on to this job using their own attendance card/proximity fob. If the employee has not clocked in when they try to log data the system will inform them that they have not clocked in, this improves the efficiency of health and safety with regards to tracking employees in the event of an emergency.

Job's can be setup or automatically assigned assuring your personnel selects the correct job when clocking. Tracking all data entered together with the employee start and stop times, Timenet allows information to be viewed edited and reports taken or exported.

Standard data collection reports include: *Clocking report - Job employee report - Job totals report - Work in progress report.*

However standard reports at times may not meet your Company's requirements, for this very reason TimeNet software has a specialised script program, to enable Job/Employee information to be viewed - printed or exported in many formats.

Timenet allows a detailed analysis of each transaction, by setting up extra fields, such as; jobs-operations- sub sections- quantities even meal menus so employees are prompted to enter data at each level, information fetched can be edited or exported for reporting.
